

IronTree Protect

Having basic data backup procedures or even cloud storage is simply not good enough anymore. The spread of ransomware and other data security threats means that a more comprehensive approach is needed.

What is this new approach?

This comprehensive approach now brings traditional backup and traditional anti-virus into one product, managed from a single console.

What does this mean for the owner of a Restaurant?

- 1 Your main Black Box Server is backed up as well as protected against all known and unknown cyber threats.
- 2 Your admin machine is completely protected and securely backed up.
- 3 Each POS device is secure.

Costs

Starting from R299 pm per site, for the same price as 12 cappuccinos per month! Note all prices exclude VAT.
